EDUCATION

Bachelor of Science in Computer Science **Expected June 2028**
Minor in Business Information Systems
Oregon State University, College of Engineering Corvallis, Oregon
Awards: 1st Place Overall, QuackHacks 2026 and 2025; SpaceXAI Winner, DubHacks 2026
Relevant Coursework: Operations Management (queuing theory, simulation, Six Sigma), Business Analytics and AI

EXPERIENCE & LEADERSHIP

Project Manager, Design for America *(Oregon State University)* **January 2026 - Present**
- Led an 11-person team through discovery for a nonprofit site used by 300+ people daily, turning 50+ stakeholder needs into specs and a prioritized roadmap to help guests in crisis find services fast.
- Designed two audience paths for a site serving opposite needs, putting Get Help first for guests on phones and giving donors a trust-focused page, shaped with center staff in co-design reviews.
- Set a mobile-first, WCAG 2.1 AA standard for visitors with little tech experience, building the approved designs as React pages in WordPress staging and presenting them at the DFA showcase.

Software Developer Intern, Impact Studio *(Project Link*: impactstudio.oregonstate.edu) **May 2026 - Present**
- Rebuilt all 11 pages of the live Drupal 10 site after diagnosing why first-time visitors couldn't tell what Impact Studio does: jargon-heavy copy, repeated content, and weak hierarchy.
- Prototyped a requested homepage showcase with AI design tools so stakeholders could react ahead of development, then shipped a swipeable before-and-after view of 10 initiatives on the live site.
- Produce traffic performance reports that guide UX and content decisions, and turn weekly feedback from 5 cross-disciplinary interns into development priorities.

VP Outreach, College of Engineering Student Council *(Oregon State University)* **2025 - Present**
- Evaluate club financials and membership data to help allocate $200K+ among requests from 50+ organizations serving 10K+ students, weighing member reach, past spending, and event impact.
- Grew event attendance 40% across 10+ events by retargeting outreach and programming.

Co-Founder, Startup Hub *(Oregon State University)* **2025 - Present**
- Built a community of 30+ founders across engineering and business, and earned a returning InventOR partnership by running a startup prototyping competition.
- Expanded founder programming with recurring pitch nights and speaker events that connect students with startup leaders.

PROJECTS

ER Overwatch | *Project Link*: bit.ly/ER-Overwatch | *QuackHacks 2026, 1st Place Overall*
React, TypeScript, MediaPipe, FastAPI, WebSockets, Gemini
- Owned the nurse dashboard for an AI triage platform for crowded ER waiting rooms, designing check-in, live vitals, and fall alerts around how nurses work so deterioration isn't missed.
- Kept AI advisory to protect clinical judgment, with nurses owning acuity over Gemini-drafted notes, and ran fall detection in-browser so only small JSON alerts leave the device.

KO.rbit | *Project Link*: bit.ly/KOrbit | *DubHacks 2026, SpaceXAI Winner*
React, TypeScript, Three.js, React Three Fiber, Socket.IO
- Engineered the battle HUD and cockpit lobby for a real-time duel where webcam pose tracking (~30 Hz) and smartphone gyroscope aim (~60 Hz) feed a server-authoritative Socket.IO server.
- Rendered interactive 3D planetary scenes from real NASA data and animated player avatars in React Three Fiber, within a 31,266-object universe.
- Debugged and fixed animation performance issues causing severe lag, restoring smooth real-time gameplay.

SKILLS

Product: User Research, Roadmapping, Prioritization, Prototyping (Figma), Design Reviews, Web Analytics, WCAG 2.1 AA
Technical & AI: Python, SQL, Excel, React, TypeScript, REST APIs, Git, Gemini API, AI prototyping (Claude, Cursor)
Mobile & Frontend: Android (Kotlin, Android Studio), Flutter/Dart, React, Next.js, Three.js, React Three Fiber
